RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 122 pages. Original publisher: Washington, DC : National Aeronautics and Space Administration ; Springfield, Va. : National Technical Information Service, distributor, 1990 OCLC Number: (OCoLC)62881223 Subject: Life support systems (Space environment) Excerpt: . . . incoming air stream passes over both layers. These two layers are necessary because the silica gel adsorbs water vapor well at high relative humidities but its efficiency decreases for relative humidities of less than 50 . Zeolite 13X, however, is more efficient for relative humidities of 35 or less. The combination of these two layers removes nearly 100 of the water vapor in the incoming stream. As a result of this water removal, the temperature of the air stream increases. These adsorbents readily desorb when the warm exiting air stream passes over. them. BLOWER The blower is a motor driven centrifugal fan. The motor is designed to operate with 115 220 vac, three-phase, 400 Hz power. De-swirl vanes help convert swift energy into useful static pressure. The blower is made of corrosion-resistant material with bearings designed to isolate grease from working air. PRECOOLER The precooler is a double pass coolant and single pass...
